PRH 078
Special Considerations for the Elderly Patient

Aging – the gradual decline of biological functions – varies widely from one individual to another. The aging process is more complicated when changes in organ functions occur at different rates. This class will help differentiate some of the normal age-related changes from the abnormal changes. We will also discuss some of the most common physiological changes associated with aging and the implications of these changes to the quality of EMS care provided to the elderly – one of the fastest-growing segments of our population.
